

Double-layer FR Tubing

PA-D Series

► Product Introduction

- The inner layer consists of high-rebound PU tubing, while the outer layer is made of flame-retardant resin to effectively achieve fire resistance and prevent sparks. It provides splash-proof protection and flame-retardant performance equivalent to UL94-VO grade.
- Product usage: Determine the installation length for the quick-connect fitting. Use a stripping tool to remove only the outer layer, then install the inner tube onto the quick-connect fitting.
- Applicable for flame and spray protection in automotive welding fixtures and robotic welding applications.
